

Product Fact Sheet

Alpha Secure's cyber insurance and cybersecurity technology are inseparable and respond to each other: our software provides the cybersecurity you need to qualify for insurance, our insurance provides the coverage you need to protect against fallout from cyber attacks, and together they drastically reduce the frequency and severity of incidents so clients stay safe and premiums stay low.

Our product includes:

- Offsite data backups, MFA for secure remote access, software version management, and more, bundled in a single software solution that installs in seconds.
- The cyber controls that are needed to qualify for cyber insurance and the insurance coverage itself – with enhancements in return for strengthening your cyber posture.
- Immediate online quoting and quick binding, making it easy for brokers to qualify clients and deliver a cyber insurance policy.
- Telemetry plus a Security Operations Center (SOC) brings advanced technology and human expertise together to detect and respond to anomalies and attacks.
